

LAPORAN PRAKTIKUM
PEMROGRAMAN BERBASIS FRAMEWORK

Pertemuan Minggu-11
Modul 11 – Firebase Login

NAMA : DINA RISKY ALIN SAPUTRI
NIM : 1841720016
KELAS : 3F

PROGRAM STUDI TEKNIK INFORMATIKA
JURUSAN TEKNOLOGI INFORMASI
POLITEKNIK NEGERI MALANG

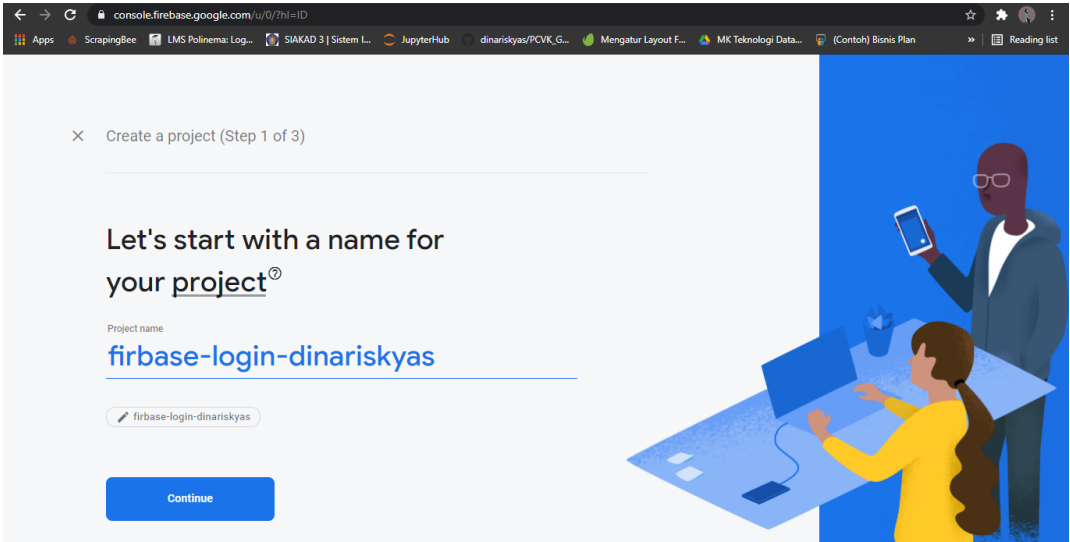

2021

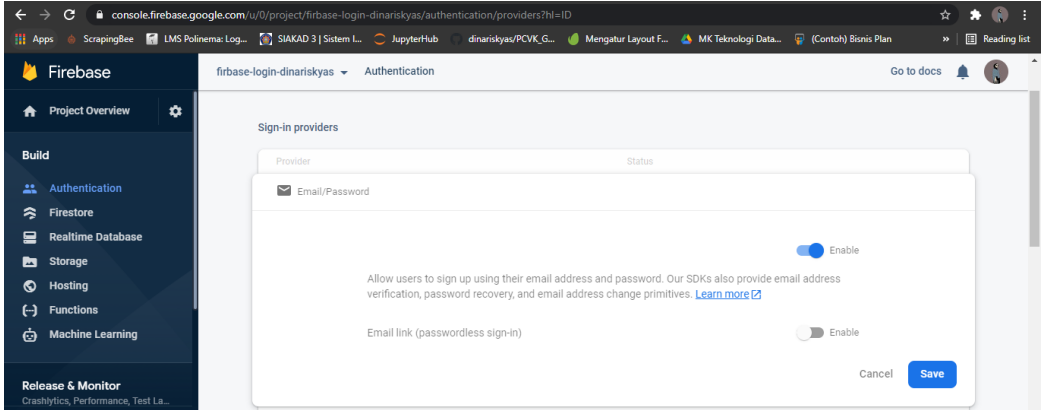

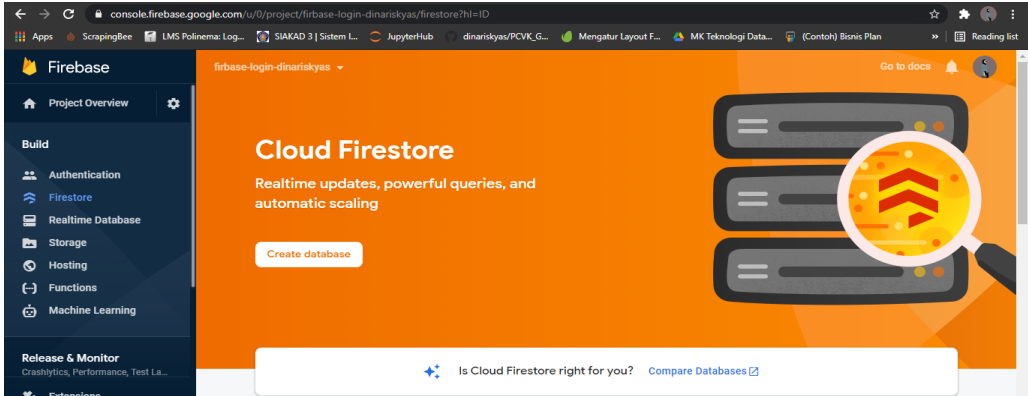

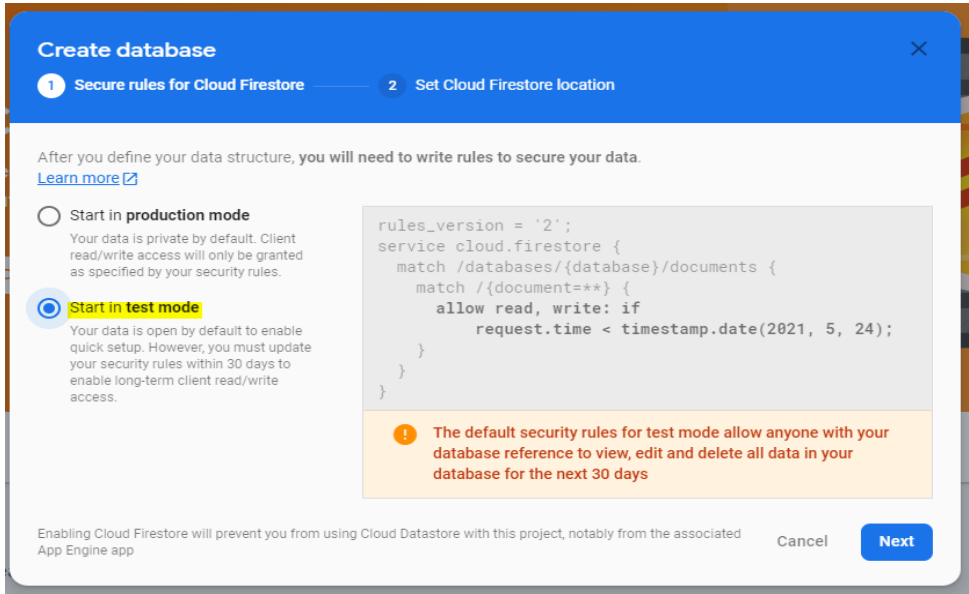

FIREBASE LOGIN

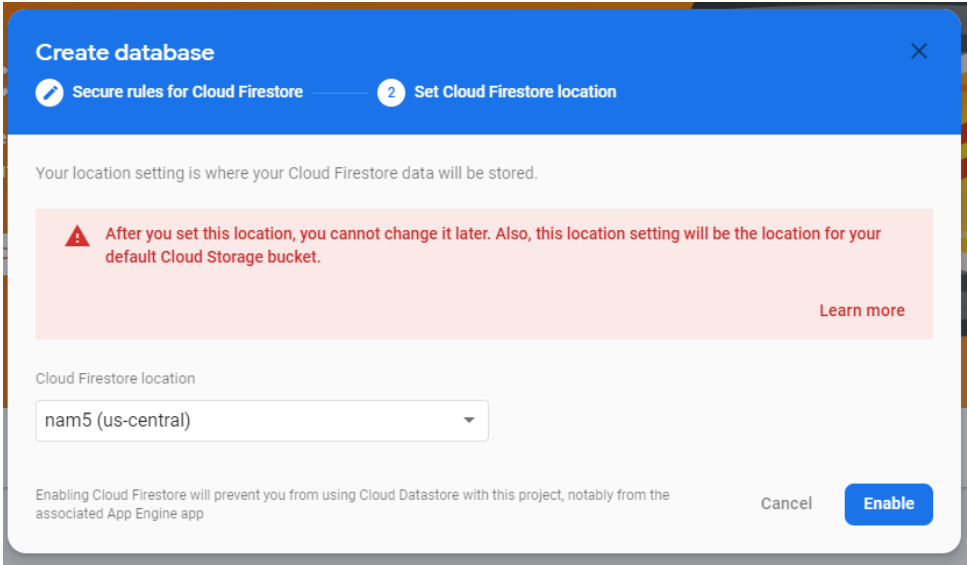

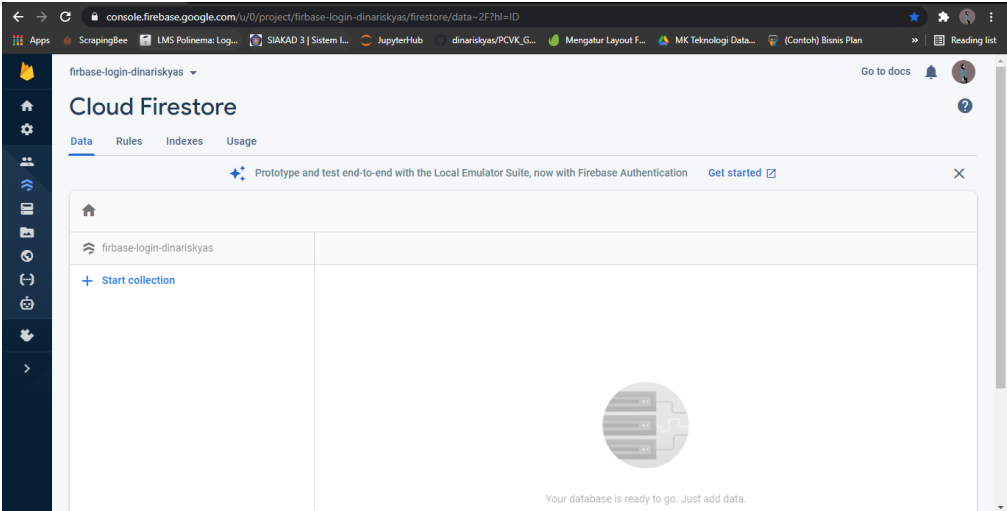

Firebase adalah serangkaian alat (bantu) untuk developer aplikasi, namun bukan hanya untuk developer aplikasi Android. Ini untuk developer aplikasi iOS dan juga developer aplikasi web. Akan tetapi, karena kursus ini adalah tentang development Android, pelajaran ini hanya membahas tentang cara menggunakan Firebase dengan aplikasi Android.

Sebagai developer Android, Anda menggunakan Android Studio untuk membangun aplikasi, namun Anda bisa menggunakan Firebase untuk menambahkan fitur ke aplikasi, mendapatkan pengguna aplikasi yang lebih luas, menguji aplikasi, menghasilkan pendapatan dari aplikasi, dan mendapatkan analisis tentang penggunaan aplikasi tersebut.

Langkah :

Langkah	Keterangan
1	<p>Setting Firebase Console</p> <p>Login ke firebase console dan add a new project.</p>  <p>Pilih authentication dan pilih tab menu Set up sign in method</p>

	
2	<p>Setelah enabling authentication pilih menu Database dan pilih create database</p> 
3	<p>Select Start in test mode.</p> 

	
4	<p>Pilih Done</p> 

Setting react app dan firebase

Langkah	Keterangan
1	<p>Buat aplikasi baru dengan perintah</p> <p><i>npx create-react-app your-project-name</i></p>

	<pre> Windows PowerShell Copyright (C) Microsoft Corporation. All rights reserved. Try the new cross-platform PowerShell https://aka.ms/pscore6 PS C:\Users\ASUS\Pemrograman-Framework\minggu11> npx create-react-app firebase-login-dinarisky Creating a new React app in C:\Users\ASUS\Pemrograman-Framework\minggu11\firebase-login-dinarisky. Installing packages. This might take a couple of minutes. Installing react, react-dom, and react-scripts with cra-template... > core-js@2.6.12 postinstall C:\Users\ASUS\Pemrograman-Framework\minggu11\firebase-login-dinarisky\node_modules\b > node -e "try{require('./postinstall')}catch(e){}" > core-js@3.11.0 postinstall C:\Users\ASUS\Pemrograman-Framework\minggu11\firebase-login-dinarisky\node_modules\c > node -e "try{require('./postinstall')}catch(e){}" > core-js-pure@3.11.0 postinstall C:\Users\ASUS\Pemrograman-Framework\minggu11\firebase-login-dinarisky\node_modu > node -e "try{require('./postinstall')}catch(e){}" > ejs@2.7.4 postinstall C:\Users\ASUS\Pemrograman-Framework\minggu11\firebase-login-dinarisky\node_modules\ejs > node ./postinstall.js + react-dom@17.0.2 + react@17.0.2 + react-scripts@4.0.3 + cra-template@1.1.2 added 1921 packages from 732 contributors and audited 1924 packages in 897.757s removed 1 package and audited 1952 packages in 13.464s 135 packages are looking for funding run `npm fund` for details found 0 vulnerabilities Success! Created firebase-login-dinarisky at C:\Users\ASUS\Pemrograman-Framework\minggu11\firebase-login-dinarisky Inside that directory, you can run several commands: npm start Starts the development server. npm run build Bundles the app into static files for production. npm test Starts the test runner. npm run eject Removes this tool and copies build dependencies, configuration files and scripts into the app directory. If you do this, you can't go back! We suggest that you begin by typing: cd firebase-login-dinarisky npm start Happy hacking! PS C:\Users\ASUS\Pemrograman-Framework\minggu11> </pre>
2	<p>Install project baru dengan perintah</p> <p><i>npm run start</i></p>

```
Success! Created firebase-login-dinarisky at C:\Users\ASUS\Pemrograman-Framework\minggu11\firebase-login-dinarisky
Inside that directory, you can run several commands:
Compiled successfully!
```

You can now view **firebase-login-dinarisky** in the browser.

```
Local:      http://localhost:3000
On Your Network: http://192.168.1.6:3000
```

Note that the development build is not optimized.
To create a production build, use `npm run build`.

Install firebase

npm install -g firebase-tools

```
PS C:\Users\ASUS\Pemrograman-Framework\minggu11\firebase-login-dinarisky> npm install -g
firebase-tools
npm WARN deprecated request@2.88.2: request has been deprecated, see https://github.com

You're about to initialize a Firebase project in this directory:

  C:\Users\ASUS\Pemrograman-Framework\minggu11\firebase-login-dinarisky

? Which Firebase CLI features do you want to set up for this folder? Press Space to select features, then Enter to confirm your choices.
> ( ) Database: Configure Firebase Realtime Database and deploy rules
  ( ) Firestore: Deploy rules and create indexes for Firestore
  ( ) Functions: Configure and deploy Cloud Functions
  ( ) Hosting: Configure and deploy Firebase Hosting sites
  ( ) Storage: Deploy Cloud Storage security rules
  ( ) Emulators: Set up local emulators for Firebase features
  ( ) Remote Config: Get, deploy, and rollback configurations for Remote Config
```

Pilih setting untuk firebase nya firebase dan Hosting

```
? Which Firebase CLI features do you want to set up for this folder? Press Space to select features, then Enter to confirm your choices.

( ) Database: Configure Firebase Realtime Database and deploy rules
(*) Firestore: Deploy rules and create indexes for Firestore
( ) Functions: Configure and deploy Cloud Functions
> (*) Hosting: Configure and deploy Firebase Hosting sites
  ( ) Storage: Deploy Cloud Storage security rules
  ( ) Emulators: Set up local emulators for Firebase features
  ( ) Remote Config: Get, deploy, and rollback configurations for Remote Config

=== Project Setup

First, let's associate this project directory with a Firebase project.
You can create multiple project aliases by running firebase use --add,
but for now we'll just set up a default project.

? Please select an option: Use an existing project
? Select a default Firebase project for this directory: firebase-login-dinariskyas (firebase-login-dinariskyas)
i Using project firebase-login-dinariskyas (firebase-login-dinariskyas)

=== Firestore Setup

Firestore Security Rules allow you to define how and when to allow
requests. You can keep these rules in your project directory
and publish them with firebase deploy.

? What file should be used for Firestore Rules? firestore.rules

Firestore indexes allow you to perform complex queries while
maintaining performance that scales with the size of the result
set. You can keep index definitions in your project directory
and publish them with firebase deploy.

? What file should be used for Firestore indexes? firestore.indexes.json
```

5	Pilih build jangan pilih Do not choose public
6	<p>Pilih</p> <pre> === Hosting Setup Your public directory is the folder (relative to your project directory) that will contain Hosting assets to be uploaded with firebase deploy. If you have a build process for your assets, use your build's output directory. ? What do you want to use as your public directory? (public) </pre> <p>Pilih Y lalu N untuk overwriting index.html</p> <pre> ? Configure as a single-page app (rewrite all urls to /index.html)? No ? Set up automatic builds and deploys with GitHub? No + Wrote public/404.html ? File public/index.html already exists. Overwrite? No i Skipping write of public/index.html i Writing configuration info to firebase.json... i Writing project information to .firebaserc... + Firebase initialization complete! PS C:\Users\ASUS\Pemrograman-Framework\minggu11\firebase-login-dinarisky> </pre>
7	<p>Untuk membangun firebase</p> <p><i>npm run build</i></p> <pre> PS C:\Users\ASUS\Pemrograman-Framework\minggu11\firebase-login-dinarisky> npm run build > firebase-login-dinarisky@0.1.0 build C:\Users\ASUS\Pemrograman-Framework\minggu11\firebase-login-dinarisky > react-scripts build Creating an optimized production build...
