

LAPORAN PRAKTIKUM
PEMROGRAMAN BERBASIS FRAMEWORK

Pertemuan Minggu-10

Modul 10 – Firebase ReactJS

NAMA : DINA RISKY ALIN SAPUTRI
NIM : 1841720016
KELAS : 3F

PROGRAM STUDI TEKNIK INFORMATIKA
JURUSAN TEKNOLOGI INFORMASI
POLITEKNIK NEGERI MALANG

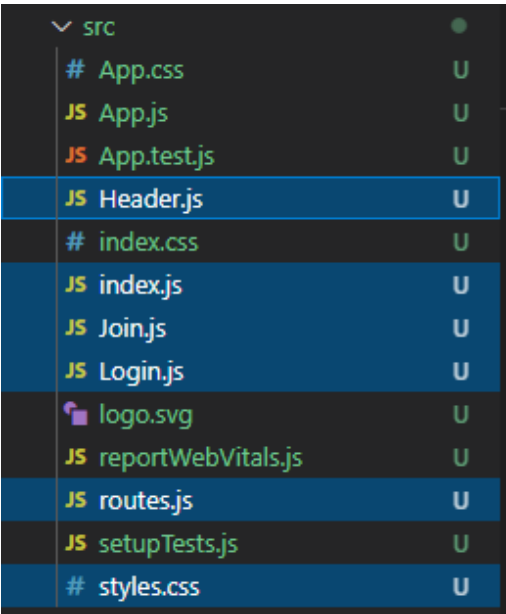

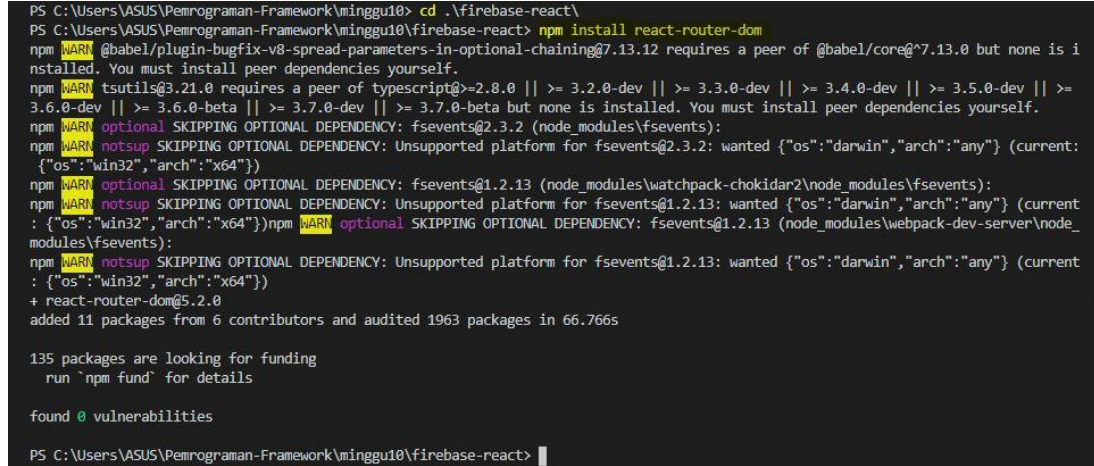

2021

Praktikum

Dalam praktikum ini kita membutuhkan firebase sebagai backend dan reactjs sebagai frontend, oleh karena itu pertama kita lakukan set up pada firebase.

1.1 Langkah Praktikum

Langkah	Keterangan
1	<p>Buatlah project react pada directory yang baru</p> <pre>OUTPUT TERMINAL DEBUG CONSOLE PROBLEMS 1: node Windows PowerShell Copyright (C) Microsoft Corporation. All rights reserved. Try the new cross-platform PowerShell https://aka.ms/pscore6 PS C:\Users\ASUS\Pemrograman-Framework\minggu10> npx create-react-app firebase-react Creating a new React app in C:\Users\ASUS\Pemrograman-Framework\minggu10\firebase-react. Installing packages. This might take a couple of minutes. Installing react, react-dom, and react-scripts with cra-template... > core-js@2.6.12 postinstall C:\Users\ASUS\Pemrograman-Framework\minggu10\firebase-react\node_modules\babel-runtime\node_modules\core-js > node -e "try{require('./postinstall')}catch(e){}" > core-js@3.10.1 postinstall C:\Users\ASUS\Pemrograman-Framework\minggu10\firebase-react\node_modules\core-js > node -e "try{require('./postinstall')}catch(e){}" > core-js-pure@3.10.1 postinstall C:\Users\ASUS\Pemrograman-Framework\minggu10\firebase-react\node_modules\core-js-pure > node -e "try{require('./postinstall')}catch(e){}" > ejs@2.7.4 postinstall C:\Users\ASUS\Pemrograman-Framework\minggu10\firebase-react\node_modules\ejs > node ./postinstall.js + cra-template@1.1.2 + react-scripts@4.0.3 + react@17.0.2 + react-dom@17.0.2 npm WARN notsup SKIPPING OPTIONAL DEPENDENCY: Unsupported platform for fsevents@1.2.13: wanted {"os":"darwin","arch":"any"} (current: {"os":"win32","arch":"x64"}) removed 1 package and audited 1952 packages in 12.022s 135 packages are looking for funding run `npm fund` for details found 0 vulnerabilities Success! Created firebase-react at C:\Users\ASUS\Pemrograman-Framework\minggu10\firebase-react Inside that directory, you can run several commands: npm start Starts the development server. npm run build Bundles the app into static files for production. npm test Starts the test runner. npm run eject Removes this tool and copies build dependencies, configuration files and scripts into the app directory. If you do this, you can't go back! We suggest that you begin by typing: cd firebase-react npm start Happy hacking! PS C:\Users\ASUS\Pemrograman-Framework\minggu10></pre>

2	<p>Setelah itu pada folder src buatlah file dengan nama <i>index.js</i> ; <i>Login.js</i> ; <i>Join.js</i> ; <i>Header.js</i> ; <i>routes.js</i> ; <i>styles.css</i> (file lain yang ada di folder src bisa dihapus saja).</p> 
3	<p>Karena pada praktikum ini kita menggunakan react router dom, maka lakukan <i>npm install react-router-dom</i> dahulu.</p> 
4	<p>Jika sudah, isilah code seperti dibawah ini sesuai dengan nama file masing-masing.</p> <p>index.js</p>

```

firebase-react > src > JS index.js > App
1  import React, { useState } from "react";
2  import ReactDOM from "react-dom";
3  import { Switch, BrowserRouter as Router, Route } from "react-router-dom";
4  import routes from "./routes.js";
5  import Header from "./Header.js";
6  import "./styles.css";
7
8  export const AuthContext = React.createContext(null);
9
10 function App() {
11   const [isLoggedIn, setLoggedIn] = useState(false);
12
13   return (
14     <AuthContext.Provider value={{ isLoggedIn, setLoggedIn }}>
15       Is logged in? {JSON.stringify(isLoggedIn)}
16       <div className="App">
17         <Router>
18           <Header />
19
20           <Switch>
21             {routes.map((route) => (
22               <Route
23                 key={route.path}
24                 path={route.path}
25                 exact={route.exact}
26                 component={route.main}
27               />
28             ))}
29           </Switch>
30         </Router>
31       </div>
32     </AuthContext.Provider>
33   );
34 }
35
36 const rootElement = document.getElementById("root");
37 ReactDOM.render(<App />, rootElement);
38

```

Login.js

```

firebase-react > src > JS Login.js > Login
1  import React, { useState, useContext } from "react";
2  import { AuthContext } from "../index";
3
4  const Login = () => {
5    const [email, setEmail] = useState("");
6    const [password, setPassword] = useState("");
7    const [error, setErrors] = useState("");
8
9    const Auth = useContext(AuthContext);
10   const handleForm = (e) => {
11     e.preventDefault();
12     console.log(Auth);
13     Auth.setLoggedIn(true);
14   };
15
16   return (
17     <div>
18       <h1>Login</h1>
19       <form onSubmit={(e) => handleForm(e)}>
20         <input

```

```

21         value={email}
22         onChange={(e) => setEmail(e.target.value)}
23         name="email"
24         type="email"
25         placeholder="email"
26     />
27     <input
28         onChange={(e) => setPassword(e.target.value)}
29         name="password"
30         value={password}
31         type="password"
32         placeholder="password"
33     />
34     <hr />
35     <button class="googleBtn" type="button">
36         
40         Login With Google
41     </button>
42     <button type="submit">Login</button>
43     <span>{error}</span>
44 </form>
45 </div>
46 );
47 };
48
49 export default Login;

```

Join.js

```

firebase-react > src > JS Join.js > [0] Join
1  import React, { useState, useContext } from "react";
2  import { AuthContext } from "../index";
3
4  const Join = () => {
5      const [email, setEmail] = useState("");
6      const [password, setPassword] = useState("");
7      const [error, setErrors] = useState("");
8
9      const Auth = useContext(AuthContext);
10     const handleForm = (e) => {
11         e.preventDefault();
12         console.log(Auth);
13         Auth.setLoggedIn(true);
14     };
15
16     return (
17         <div>
18             <h1>Join</h1>
19             <form onSubmit={(e) => handleForm(e)}>
20                 <input
21                     value={email}
22                     onChange={(e) => setEmail(e.target.value)}
23                     name="email"
24                     type="email"
25                     placeholder="email"
26                 />
27                 <input
28                     onChange={(e) => setPassword(e.target.value)}
29                     name="password"
30                     value={password}
31                     type="password"
32                     placeholder="password"
33                 />
34                 <hr />
35                 <button class="googleBtn" type="button">
36                     
40                     Join With Google

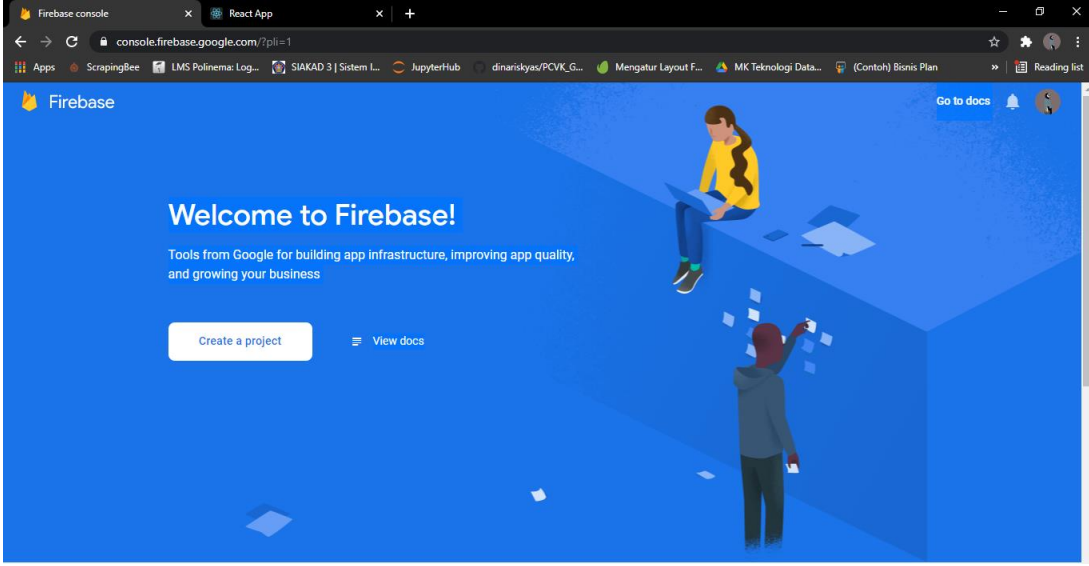

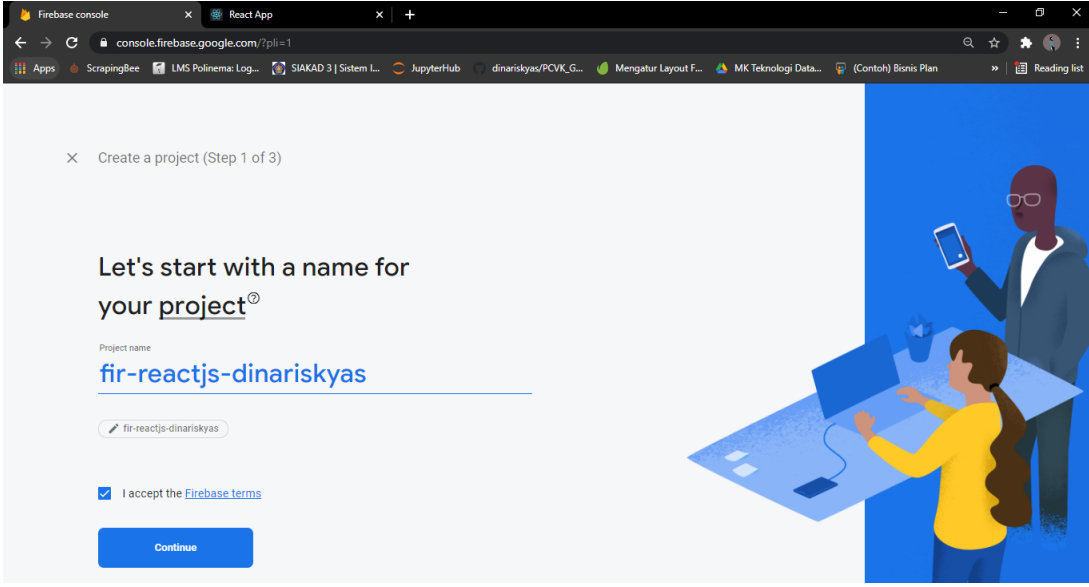

```

	<pre> 41 </button> 42 <button type="submit">Join</button> 43 {error} 44 </form> 45 </div> 46); 47 }; 48 49 export default Join; </pre>
	<p>Header.js</p> <pre> firebase-react > src > JS Header.js > [🔍] Header 1 import React from "react"; 2 import routes from "../routes"; 3 import { Link } from "react-router-dom"; 4 5 const Header = () => (6 <ul className="nav"> 7 {routes.map((route, i) => (8 <li key={i}> 9 <Link to={route.path}>{route.name}</Link> 10 11))} 12 13); 14 15 export default Header; </pre>
	<p>routes.js</p> <pre> firebase-react > src > JS routes.js > [🔍] default 1 import React from "react"; 2 import Login from "../Login"; 3 import Join from "../Join"; 4 5 const routes = [6 { name: "Join", path: "/", exact: true, main: () => <Join /> }, 7 { name: "Login", path: "/login", exact: true, main: () => <Login /> }, 8]; 9 10 export default routes; </pre>
	<p>styles.css</p>

```

firebase-react > src > # styles.css > button[type="submit"]
1  .App {
2    font-family: sans-serif;
3    padding: 50px;
4  }
5
6  h1 {
7    margin: 0 0 25px 0;
8    text-align: left;
9  }
10
11 form {
12   display: flex;
13   flex-direction: column;
14 }
15

```

Setelah itu lakukan setting pada project firebase yang kalian buat tadi agar react kalian dapat terhubung dengan firebase. Pada setting get started pilih yang untuk web.

	
8	<p>Lalu setelah itu anda akan mendapatkan script konfigurasi yang akan menjadi penghubung dengan project react anda. Salin script tersebut lalu tempel pada file baru di dalam folder src yang kita beri nama <i>firebase.config.js</i> (gambar dibawah adalah contoh, sesuaikan script yang anda dapat dari firebase).</p> <pre> Copy and paste these scripts into the bottom of your <body> tag, but before you use any Firebase services: <!-- The core Firebase JS SDK is always required and must be listed first --> <script src="https://www.gstatic.com/firebasejs/8.4.1/firebase-app.js"></script> <!-- TODO: Add SDKs for Firebase products that you want to use https://firebase.google.com/docs/web/setup#available-libraries --> <script src="https://www.gstatic.com/firebasejs/8.4.1/firebase-analytics.js"></script> <script> // Your web app's Firebase configuration // For Firebase JS SDK v7.20.0 and later, measurementId is optional var firebaseConfig = { apiKey: "AIzaSyAxN01YcknMB0anPRria_X00yyo9f0Fp84", authDomain: "fir-reactjs-dinariskyas.firebaseio.com", projectId: "fir-reactjs-dinariskyas", storageBucket: "fir-reactjs-dinariskyas.appspot.com", messagingSenderId: "100956294020", appId: "1:100956294020:web:19ae121ed6d9a8545debd1", measurementId: "G-CGFHGE3649" }; // Initialize Firebase firebase.initializeApp(firebaseConfig); firebase.analytics(); </script> </pre>

	<p>firebase.config.js</p> <pre> firebase-react > src > JS firebase.config.js > ... 1 var firebaseConfig = { 2 apiKey: "AIzaSyAxN01YcknMBOanPRria_X00yyo9f0Fp84", 3 authDomain: "fir-reactjs-dinariskyas.firebaseio.com", 4 projectId: "fir-reactjs-dinariskyas", 5 storageBucket: "fir-reactjs-dinariskyas.appspot.com", 6 messagingSenderId: "100956294020", 7 appId: "1:100956294020:web:19ae121ed6d9a8545debd1", 8 measurementId: "G-CGFHGE3649" 9 }; 10 11 export default firebaseConfig; 12 </pre>
9	<p>Lalu lakukan inisialisasi firebase config dengan menambahkan code pada index.js seperti dibawah ini.</p> <pre> firebase-react > src > JS index.js > ... 1 import React, { useState } from "react"; 2 import ReactDOM from "react-dom"; 3 import { Switch, BrowserRouter as Router, Route } from "react-router-dom"; 4 import routes from "./routes.js"; 5 import Header from "./Header.js"; 6 import "./styles.css"; 7 import firebase from "firebase"; 8 import firebaseConfig from "./firebase.config"; 9 10 firebase.initializeApp(firebaseConfig); 11 12 export const AuthContext = React.createContext(null); </pre>
10	<p>Jika sudah berhasil maka coba jalankan, jika tidak terdapat error maka project anda telah terhubung dengan firebase.</p>

	
11	<p>Selanjutnya aktifkan terlebih dahulu authentication email dan google pada firebase console.</p> 

Jika sudah, lakukan edit code pada **Join.js** untuk membuat email dan password untuk user. Pertama import dahulu objek firebase agar bisa digunakan pada **Join.js** dengan code berikut.

12

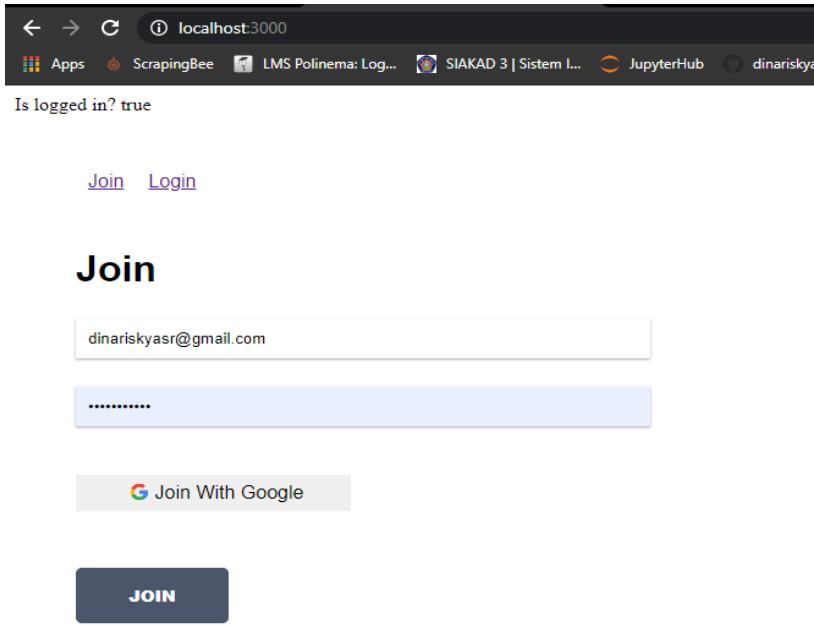

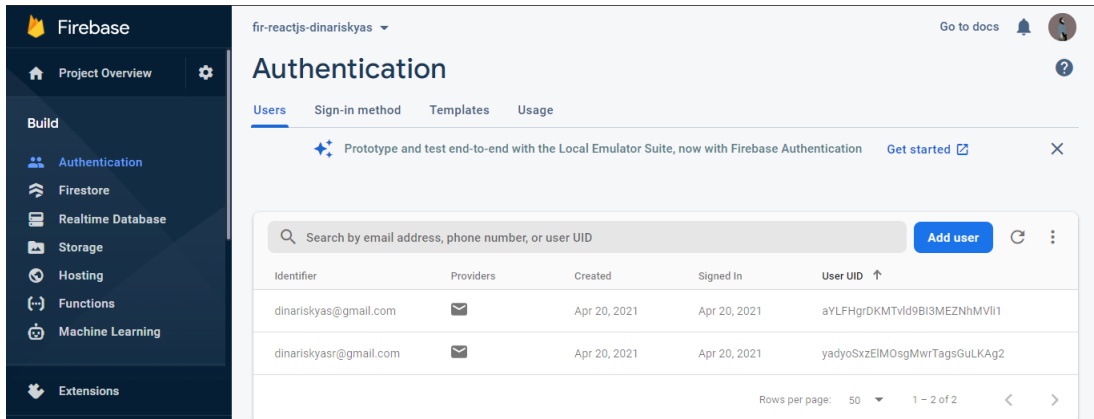

```
firebase-react > src > JS Join.js > ...
1  import React, { useState, useContext } from "react";
2  import { AuthContext } from "../index";
3  import firebase from "firebase";
4
```

Kemudian cari method auth dan lakukan edit code seperti dibawah ini.

```

9
10  const Auth = useContext(AuthContext);
11  const handleForm = (e) => {
12    e.preventDefault();
13    firebase
14      .auth()
15      .createUserWithEmailAndPassword(email, password)
16      .then((res) => {
17        if (res.user) Auth.setLoggedIn(true);
18      })
19      .catch((e) => {
20        setErrors(e.message);
21      });
22    // console.log(Auth);
23    // Auth.setLoggedIn(true);
24  };

```

13	<p>Silahkan coba pada aplikasi dengan klik join, lalu isikan email dan password.</p> 
	<p>Coba cek pada firebase maka user telah terbuat seperti dibawah ini.</p> 
14	<p>Langkah selanjutnya adalah bagaimana caranya agar kita dapat sign in/login dengan akun yang telah dibuat, yaitu dengan cara melakukan edit code pada Login.js. Pertama import dahulu objek firebase agar bisa digunakan pada Login.js dengan code berikut.</p>

	<pre> firebase-react > src > JS Login.js > ... 1 import React, { useState, useContext } from "react"; 2 import { AuthContext } from "../index"; 3 import firebase from "firebase"; 4 </pre>
	<p>Kemudian cari method auth dan lakukan edit code seperti dibawah ini.</p> <pre> 9 10 const Auth = useContext(AuthContext); 11 const handleForm = (e) => { 12 e.preventDefault(); 13 firebase 14 auth() 15 signInWithEmailAndPassword(email, password) 16 then((res) => { 17 if (res.user) Auth.setLoggedIn(true); 18 }) 19 catch((e) => { 20 setErrors(e.message); 21 }); 22 // console.log(Auth); 23 // Auth.setLoggedIn(true); 24 }; 25 </pre>
15	<p>Silahkan coba pada aplikasi dengan cara klik login kemudian masukkan email dan password yang telah didaftarkan, kemudian perhatikan keterangan login pada pojok kiri atas dengan perubahan kondisi dari <i>false</i> menjadi <i>true</i> yang menandakan anda telah berhasil login.</p>

Is logged in? false

[Join](#) [Login](#)

Login

 Login With Google

LOGIN

Menjadi

Is logged in? true

[Join](#) [Login](#)

Login

 Login With Google

LOGIN

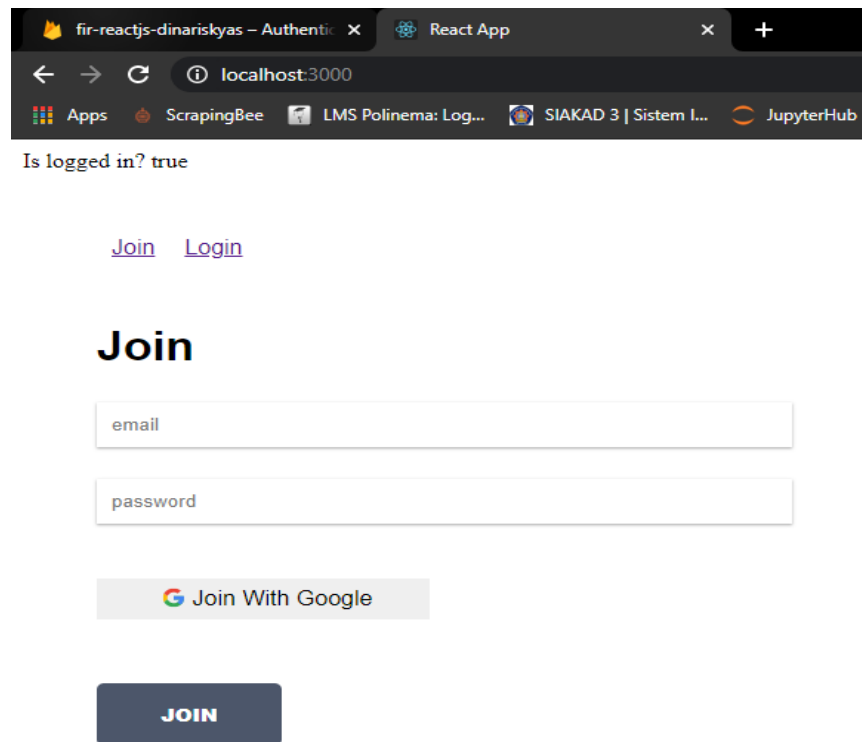

1.2 Soal Langkah Praktikum

Pada button join with google belum terdapat aksi, silahkan tambahkan function agar dapat mendaftar dengan cara klik button tersebut lalu memilih akun gmail yang akan dipakai.

Langkah	Keterangan
1	<p>Buka file Login.js kemudian tambahkan beberapa kode seperti gambar berikut:</p> <pre>firebase-react > src > JS Join.js > [0] Join > [0] signInWithGoogle 21 }); 22 // console.log(Auth); 23 // Auth.setLoggedIn(true); 24 }; 25 26 const auth = firebase.auth(); 27 const googleProvider = new firebase.auth.GoogleAuthProvider() 28 const signInWithGoogle = () => { 29 auth.signInWithPopup(googleProvider).then((res) => { 30 console.log(res.user) 31 if (res.user) Auth.setLoggedIn(true); 32 }).catch(e => { 33 setErrors(e.message); 34 }); 35 } 36 }</pre>
	<p>Dan tambahkan juga pada tag button untuk melakukan aksi onClick Login With Google</p> <pre>firebase-react > src > JS Join.js > [0] Join 49 onChange={ (e) => setPassword(e.target.value)} 50 name="password" 51 value={password} 52 type="password" 53 placeholder="password" 54 /> 55 <hr /> 56 <button class="googleBtn" type="button" onClick={signInWithGoogle}> 57 61 Join With Google</pre>
2	Hasil

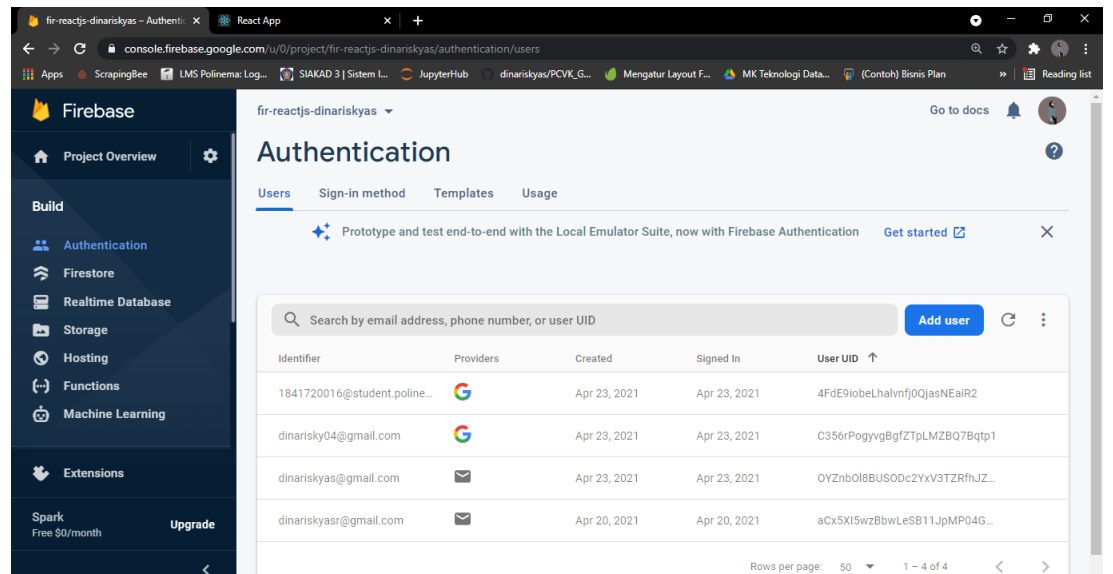

Ketika dipilih salah satu akun gmail maka yang sebelumnya false akan menjadi true pada is logged in.

Maka pada fitur Authentication Users pada console.firebase.google.com akan tersimpan akun gmail yang telah dipilih pada saat memilih akun gmail yang akan

dipakai pada gambar sebelumnya.
